

# Reflected XSS into HTML context with nothing encoded

This lab contains a simple [reflected cross-site scripting](#) vulnerability in the search functionality.

To solve the lab, perform a cross-site scripting attack that calls the `alert` function.

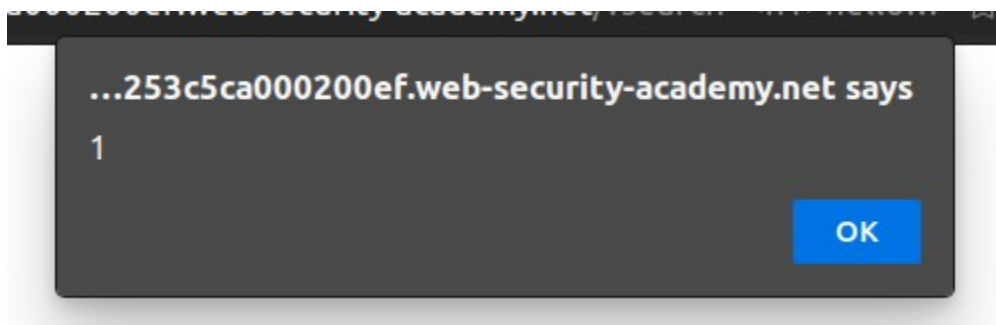

-when open lap

-We will go to the search box, We will write the following code :

-Then the alert value will alert ( 1 ) , in this way .

-This indicates a cross-site scripting vulnerability .

-Mission accomplished
